List of Korean datasets on health

1. Korean Health Panel Study (KHPS)
2. National Health Insurance Service (NHIS) claims data
3. Korean National Health and Nutrition Examination Survey (KNHANES)

Table of Contents

Overview

Korean Health Panel Study (KHPS)

National Health Insurance Service (NHIS) claims data

Korean National Health and Nutrition Examination Survey (KNHANES)

What's inside?

- Demographic and socioeconomic variables
 - Individual and household income
 - Educational attainment
- Health care utilization
 - Outpatient / inpatient / emergency care
 - Unit of observations: visit level
- Health behaviors
 - Smoking / drinking / exercise
 - Consumption amount denoted in categories, not continuous
 - Based on the action before the survey date
- Vital
 - Death and birth
 - Not many

Who's inside?

- Sample size
 - Household: 7,000 / Individual: 21,000
 - Not big enough for rare outcome analysis
- Panel structure
 - 2008 - 2018
 - 2 cohorts: 2008-2018 / 2014 - 2018

How to get access

- Request access here ([Korean](#) / [English](#))
 - All you need to do is sign the consent form
- Access to the file: physical
 - Data will be sent to you by email
- Difficulty: 2 (easy)

Table of Contents

Overview

Korean Health Panel Study (KHPS)

National Health Insurance Service (NHIS) claims data

Korean National Health and Nutrition Examination Survey (KNHANES)

What's inside?

- Beneficiary information
 - Health insurance type
 - No income, but health insurance premium
 - No education
- Health care utilization
 - T20: visit level (diagnosis / payment / surgery)
 - T30: procedures
 - T40: additional diagnosis
 - T60: prescription
- Vital
 - Death and birth
 - Usually large enough for analysis

T20 health care visit dataset

- Diagnosis
 - Coded using **KOICD** (ICD-10 codes in Korean)
 - Many are masked in the Standard Cohort Database
- Coinsurance Reduction Program for Rare and Severe Diseases
 - Can be used to identify cancer diagnosis
- Payment
 - Amount paid by the beneficiary
 - Amount paid by NHIS

- Procedure codes are hard to find
 - Need to look at Health Insurance Review and Assessment Service procedure codes ([Link](#))
 - Only in PDF format, not in Excel

Who's inside?

- Sample size
 - Standard Cohort Database: 1 million random sample
 - Can be customized
 - No household or family relationship
- Panel structure
 - 2002 - 2019

How to get access

- Request access here (**Korean** / **English**)
 - Need IRB exemption ⇒ **MUST BE IN KOREAN!**
 - Detailed research proposal

- Access to the file: virtual
 - **NEED TO BE PHYSICALLY IN KOREA**
 - Standard Cohort Database: VPN access
 - Customized database: need to go to research data center

- Difficulty: 4 (difficult)
 - A lot of hassle and inefficiencies
 - Expensive
 - Strongly recommend calling NHIS even before IRB stage (Emails are not answered)

Caveats

- Data do not include private care (비급여)
 - Only hospital visits that generate insurance claims
- Cancer screenings are stored in separate datasets
 - Not included in T30
 - Need to be requested separately (call first)
- Importing external data and exporting research output is difficult
 - Sometimes, external Stata packages are not allowed (I KNOW!)
 - Exporting research output requires approval and takes a long time
 - Only 10 files a day are allowed (be aware of image resolutions)
- Expensive and data not well documented
